June 2nd, 2020 -  
astronomers soon  
discovered that the  
exoplanet had once  
been a star that  
was part of a  
binary system the  
pulsar had been the  
second star and the  
two had orbited  
each other in those  
days however the  
stars eventually  
burned through  
their fuel and got  
so close that the  
bigger one yanked  
the matter from the  
smaller star 5''
