January 30th, 2020 - in this issue of the bjd ardigo et al and the international confocal working group icwg present an extensive and well performed study on noninvasive imaging of superficial inflammatory skin diseases focusing on defining diagnostic criteria for distinction between the three main groups psoriasiform spongiotic and interface dermatitis 1 reflectance confocal microscopy rcm was used'

'quick overview of possibilities offered by reflectance and

May 31st, 2020 - reflectance confocal microscopy rcm is a non invasive mainly in vivo technique that permits a visualization at the cellular level of the skin until a vertical depth of 0.5 mm because it is an expensive time consuming tool it is only available in a few university hospitals worldwide but its indications in onto dermatology onco dermatology and inflammatory skin diseases are increasing'

'the use of reflectance confocal microscopy in selected

October 11th, 2019 - the presented method potentially has broad application in the diagnosis of skin diseases this article provides a summary of the latest reports and previous achievements in the field of reflectance confocal microscopy general characteristics of confocal images in selected inflammatory skin diseases are presented'

'reflectance confocal microscopy an overview of technology

May 13th, 2020 - in vivo reflectance confocal microscopy rcm is a noninvasive modality for the assessment of physiologic and pathologic conditions of the skin similar to dermoscopy rcm allows lesions to be analyzed noninvasively and similar to histology rcm images provide high resolution in both vertical and horizontal planes'

'reflectance confocal microscopy for skin diseases studers

May 29th, 2020 - at the end of each chapter core messages recapitulate the most pertinent aspects reflectance confocal microscopy for skin diseases will be a valuable resource for all physicians involved in the diagnosis and treatment of neoplastic and inflammatory skin diseases" in vivo diagnosis of primary cutaneous amyloidosis the

May 23rd, 2020 - primary cutaneous amyloidosis pca is a form of localized amyloidosis it is characterized by the deposition of a fibrillar material in the superficial dermis without affecting other systems or ans the diagnosis can be made clinically but usually a skin biopsy is performed in order to exclude other skin diseases with similar appearance reflectance confocal microscopy rcm is a novel'

'role of handheld in vivo reflectance confocal microscopy

May 23rd, 2020 - handheld in vivo reflectance confocal microscopy hh rcm is a useful modern technique in diagnosis and follow ups of many skin diseases this noninvasive device provides high resolution and high contrast real time images to study both the skin and the ocular surface structures that can help clinicians to confirm the diagnosis of fd'

'the use of reflectance confocal microscopy in selected

April 13th, 2020 - reflectance confocal microscopy has also been applied in the study of a number of non neoplastic skin diseases especially inflammatory dermatoses currently the histopathological examination is the primary diagnostic tool in dermatology yet a skin biopsy is painful leaves a scar and the final diagnosis may require multiple interventions'
